

AltaPay Prestashop Module

Prerequisites	2
Installation	2
Configuration	4
Important	8
FAQ	9
Changelog	10

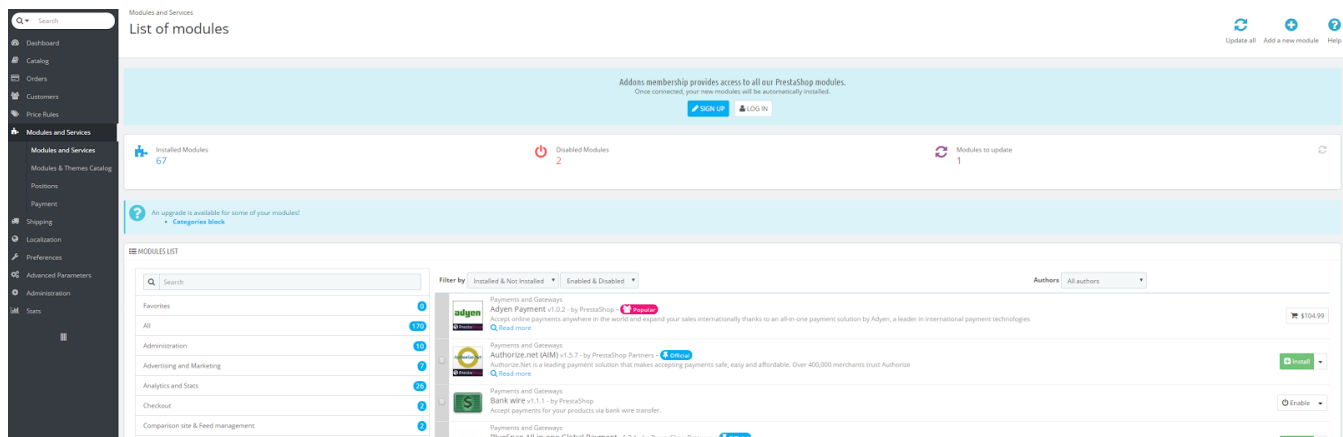

Prerequisites

We highly recommend to gather all the information below before starting the installation

1. PHP Supported versions: 5.4.x, 5.5.x, 5.6.x, 7.x
2. PrestaShop Supported versions: 1.6.x
3. Prerequisites for the configuration of the plug-in. AltaPay provides these.
 - a. AltaPay credentials and gateway information
 - i. Username
 - ii. Password
 - iii. Terminal
 - iv. Gateway

Installation

To install the AltaPay module go to 'Modules And Services' -> 'Modules And Services' and click on "Add a new module" from the top-right corner.

Now click on "Choose a file" from the "Add a new module" tab and find the Altapay.zip file. When you chosen the file, click on "Upload the module".

Payments and Gateways
 AltaPay v1.0 - by AltaPay A/S
AltaPay - payments less complicated

[Install](#)

bulk actions

A window will open - click on "Proceed with the installation". When it is done a green bar will be visible and state that the module has been successfully installed.

Configuration

To configure the module you would need your AltaPay gateway credentials:

- API username: This is an e-mail-address
- API password: Have been provided to you by the AltaPay Customer Care team.
- API url: This url will also have been provided to you. For testing please use ["https://testgateway.altapaysecure.com"](https://testgateway.altapaysecure.com)

Go to 'Modules and Services' -> 'Modules and Services'

Find the AltaPay module. This can be done by searching for 'AltaPay' or go to 'Payment and Gateways' and find the AltaPay module.

Click on 'Configure' for the AltaPay module.

Now you can enter the credentials for the API user and URL. The default value for the 'Callback IP address' doesn't need to be changed.

Modules and Services / altapay / Configure

Configure AltaPay

Module(s) installed successfully.

AltaPay - payments less complicated

How to use this module

1. Enter merchant details (username, password, etc.) below
2. Add your payment methods (credit card, PayPal, etc.) in the Terminals panel

Once done you're ready to accept payments and start selling.

MERCHANT DETAILS

* API username

API password
Fill this to change the password

* API URL
Typically your installation for testing will be "https://testgateway.altapaysecure.com/" and for production it will be "https://yourdomain.altapaysecure.com/"

* Callback IP address
Module only allows callbacks from this IP address (contact AltaPay if you do not know this)

You shall now set up the terminals. At the AltaPay module configuration page, at the bottom you find a list of "Terminals". There is a plus sign which you would need to click on in order to add a new terminal.

Search

When setting up a terminal you have to select the icon and name, that is going to be shown in the check flow. The currency must correspond with the currency on the terminal at AltaPay. The payment type indicates if the money would be captured on reservation(‘Authorize and capture’) or the merchant would have to capture, when delivering the goods.

The screenshot shows the 'Configure' page for the AltaPay module in Prestashop. The left sidebar contains a navigation menu with options: Dashboard, Catalog, Orders, Customers, Price Rules, Modules and Services (selected), Shipping, Localization, Preferences, Advanced Parameters, Administration, and Stats. The 'Modules and Services' section is expanded, showing 'Modules & Themes Catalog', 'Positions', and 'Payment'. The main content area is titled 'Configure AltaPay' and features a 'TERMINAL DETAILS' section. This section includes several configuration fields: 'Display name' (set to 'MobilePay'), 'Icon' (set to 'icon-creditcard.png'), 'AltaPay terminal' (set to 'christensen.io Test MobilePa'), 'Currency' (set to 'DKK (DKK)'), and 'Payment type' (set to 'Authorize only'). Each field has a red asterisk indicating it is required. Below these fields, the 'Status' is set to 'Enabled' with a radio button. A 'Back to list' button is located at the bottom left of the configuration area.

Important

In your Prestashop system the ‘Transaction ID’ is the ID which matches the ‘Order ID’ within the AltaPay backend and therefore please do not use the Prestashop order id as reference ID when talking to AltaPay support.

The screenshot shows the Prestashop Orders page for Order UYPLSGMIV from Simion Z. The page is divided into several sections:

- Order Details:** Shows the order date (11/02/2017 14:41:57), amount (0), weight (0.000 kg), and currency (0,00 kr). It also includes checkboxes for 'Recycled packaging' and 'Gift wrapping'.
- PAYMENT INFORMATION:** A table showing the payment details for the order. The Transaction ID is 19_1509630109692, and the Amount is 1.428,64 kr. The Invoice is #IN000013.
- Items Table:** A table listing the items in the order with their IDs, descriptions, prices with and without tax, ordered quantities, captured quantities, refunded quantities, and total amounts.

ID	Description	Price with tax	Price without tax	Ordered	Captured	Refunded	Quantity	Total amount
demo_2	Blouse - Size : S, Color : Black	33.75	27.00	14	0	0	0	472.50
demo_4	Printed Dress - Size : S, Color : Beige	63.74	50.99	15	0	0	0	956.14
- Transaction Details:** A table showing the transaction details, including the Transaction ID (19_1509630109692), Payment ID (2720), Card Brand (Visa), Card Number (423423**3423), Card Country (PH), Payment Type (payment), Payment Status (succeeded), Payment Nature (CreditCard), and Latest Error.

In the latest updates, notable changes have been added regarding Partial Refunds, Partial Captures, Good-will Refunds and tax data, as well as the possibility of sending the order lines.

Both Good-will Refunds and sending the order lines options can be used by checking the afferent checkboxes, under Orders section. Tax data wise, besides tax amount the tax percent has been included in createPayment, Capture and Refund body requests.

FAQ

- How to make a good-will refund ?
 - Before pressing the Refund button, Admin panel -> Orders -> View -> PAYMENT INFORMATION section, you need to check the checkbox “Enforce Good-will refund”. In this way, the goods type, sent to the payment gateway, will be set to *refund*.
- What is the difference between a normal refund and a good-will one ?
 - There are two differences:
 - first one related to the goods type: item - for normal refund and refund - for good-will refund;
 - in a normal refund Klarna will check the address with the one stored while this check doesn't apply to the good-will one.
- What data is sent if I choose not to send orderlines ?
 - *Capture* and *Refund*: only the payment ID along with the amount will be sent;
 - *Good-will refund*: an “dummy” item data set will be sent when the request is made; tax percent and tax amount will be set to 0.00.

If any errors or issues are encountered, please contact our support at support@altapay.com.

Changelog

Version	Notes
2017-11-13	Restructure of the documentation
2017-11-01	Order lines support and good will refund introduced
2016	Initial documentation
